

TREE OF *PHYLLANTHUS ACIDA* (L.) SKEELS, GROWING IN FLORIDA. (SEE S. P. I. NO. 39261.)

This tree stands on the place of C. B. Douglas at Miami, Fla. The clustering of the shoots at the end of the branches gives it the appearance of having pinnately compound leaves. The leaves are in reality simple and alternate. The tree is an attractive ornamental in Florida, aside from the fact that it produces large quantities of peculiarly acid fruits. (Photographed by Wilson Popenoe, June 23, 1915; P16366FS.)
